

VEUTER (VEU) White Paper

Oct. 2021

The impossible dream made possible by the greatest Web 3.0 project Veuter!

Contents

1. Project Overview
2. Introduction to Veuter
3. Veuter Expansion
4. Token Allocation
 - 4.1 Planned Coin Distribution
5. Roadmap
6. Team
5. Development Wallet
6. VEU Launchpad Wallet
7. Implementation Consideration
 - 7.1 User Control
8. Legal
9. The Principle Of Transparency
10. Disclaimer Of Liability
11. Social Media

Project Overview

VEU is the BEP-20 token created in BSC. To drive the synthesis of these insights, we will create a platform to download decentralized web assets as quickly as possible, allowing app developers to directly reward consumers who provide their core resources and use this "found value" to transact with publishers and apps. developers without fiat currency.

We will expand Veuter and introduce a new token, VEU, to implement a distributed infrastructure services economy. Within the VEU economy, end users can offer infrastructure services in small increments in exchange for tokens. A blockchain solution will provide a store of value and medium of exchange that will scale to meet anticipated demand. With the launch of Veuter, we will accelerate the introduction of the platform by eliminating existing Veuter inefficiencies.

This will provide broad familiarity with the token's existence, user experience and economics, along with a strong appeal for the underlying technology. The launch of Veuter will also prove the effectiveness of using blockchain-based rewards to provide infrastructure services in small increments over a large installed base.

In parallel, we will work with third-party developers to create and promote a marketplace that supports networking and the fastest downloads of decentralized filegroups in general and a marketplace for distributed infrastructure services based broadly on networking and storage primitives, which are underpinnings of the existing Veuter technology. We will also work with third-party publishers and app developers beyond the existing Veuter ecosystem on services which consumers may spend their tokens on. Ultimately, hundreds of millions of end users will be equipped with a robust means of deriving small amounts of value from their technical resources, and will be able to spend that value on goods and services.

Introduction to Veuter

Veuter swarms suffer from structural inefficiencies which frequently lead to the premature deterioration or death of swarms. Due to upload/download speed asymmetry, files frequently complete downloading long before a peer has been able to upload an equivalent number of bytes. Once the downloading peer has the entire file, there is no economic incentive to continue to make the file available to other downloaders through seeding. That means users leave swarms without uploading as much data as they have downloaded, which results in Veuter swarms not lasting as long as they need to. In some cases, it is possible for a swarm to enable the completion of a download even in the absence of a seed. Additionally, the Veuter uses a design decision known as "rarest first," which dictates that a client should prioritize requesting to download the pieces that are held by the fewest peers in the swarm to which it has

connected. This mechanism is intended to flatten the distribution of pieces to decrease the likelihood of a swarm losing a key peer or peers who are the sole providers of a required piece.

Veuter provides the fastest download of decentralized file groups.

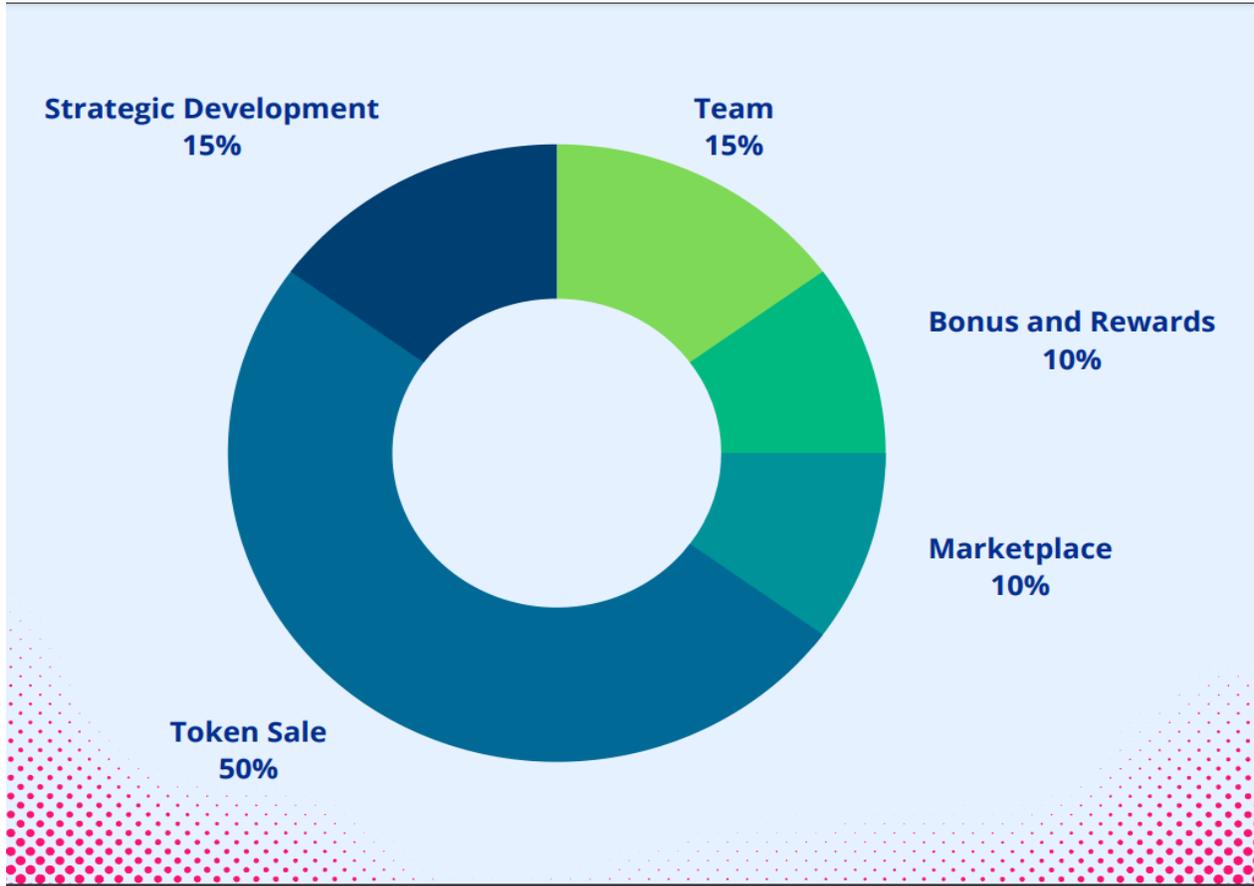

Veuter Expansion

As we examined how Veuter's expertise and ecosystem could be used to realize the potential of blockchain technologies, we identified three key insights::

1. Internet users are reluctant to pay for digital goods and services online with fiat currency. Instead, they pay with their attention.
2. The Veuter suffers from structural inefficiencies that limit the lifespan of swarms and thus limit its overall efficacy as a protocol.
3. There is a large untapped market for the application of Veuter technology to new use cases.

Veuter Contract Address

0x10f36fd0ce8c3bc0544adb17756a6ed97e383cdb

The following table shows the planned distribution of coins

Group of VEU Holders	Number of Coins
VEU Launchpad Wallet	5,000,000,000 VEU
Development Wallet	1,500,000,000 VEU
Team Wallet (12 Month Lock 8.33% Monthly Release)	1,500,000,000 VEU
Bonus and Rewards Wallet	1,000,000,000 VEU
Marketplace	1,000,000,000 VEU
Total Supply	10,000,000,000 VEU

Roadmap

Stage 1 (2021-2022)

- Establishment of the Veuter idea
- Settlement of Veuter Team
- The formalization of the project structure
- Formalization of the legal structure
- Setting the project's budget and promotion scheme

Stage 2 (2022-2023)

- Creation of the official website
- Launch and announcement of Crypto Exchange software
- Launch of Pre-sale on its own platform
- Listing of 5 stock exchanges after the sale

Stage 3 (2023-2024)

- Listing of the Veuter at major crypto exchanges
- Developing the Exchange and Stock
- App solutions
- Announcement of new partnerships
- Focusing on game technologies in the **Metaverse**

Stage 4 (2024-2025+)

- Disclosure of Metaverse projects and publication of completed ones.
- Starting work on VR and Conducting VR tests
- Launching the out of blockchain solution
- Launching the solution to perform grants and VEU ecosystem marketing
- VEU ecosystem promotion

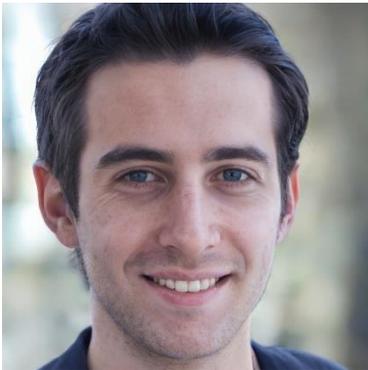

TEAM

Halden Schwartz – CEO

Ted Walker - COO

Patrick Hill – CTO

John Smith Jr - CFO

Development Wallet

with operational funds, not permitted to move or being traded (excluding MM). The funds from this wallet will be spent on the affiliate program during the VEU Launchpad ICO, market making activity (MM) and as a reserve for the VEU Exchange development.

VEU Launchpad Wallet

with backup funds, not permitted to move or being traded. Funds from this wallet are reserved for the VEU Launchpad ICO.

Implementation Considerations

Implementation Considerations

Blockchain VEU applications will be supported by the tens of millions of Veuter daily active users. To minimize opportunities for fraud, VEU applications will provide service in small increments, waiting for payment to be confirmed before additional service is provided. This will require transactions to be handled at a granular level and confirmed in a matter of seconds, ideally in less than a second. Even the most conservative estimates of capacity requirements anticipated dozens of transactions per second. With these needs in mind, it is clear that existing public blockchains will not be able to support on-chain processing and settlement in the near future.

User Controls

We plan to introduce features such as Veuter Speed and VEU transactional support into Veuter clients in phases to allow us to iterate towards the clearest possible user education journey and thus to optimize end-user participation. Participation in VEU transactions is required to be both fully disclosed and completely optional for end users.

Legal

Veuter, in the peace and tranquility of the country, state and societies it will serve they are respectful and adhere to all applicable laws to ensure their honesty, that it will fulfill all necessary legal responsibilities in the manner prescribed by law. we believe that the activities will be carried out in accordance with the principles of public disclosure and transparency although functioning systems are more accessible, cheaper and faster for the sake of humanity Veuter declares and undertakes that he will try to be supportive.

The Principle Of Transparency

In accordance with the transparency principle adopted by Veuter, all its users and investors are regularly it will inform you as follows. The aim of this study is to evaluate the progress of all the projects, and its structure, etc. when and in what way does he regularly perform all such matters as both on the official website and on all social and traditional media Veuter will announce it to the public.

Disclaimer Of Liability

This white paper and other documents published in connection with this white paper are related to the following; The Veuter platform uses these considerations for the purpose of development and continuity. All information specified in this document may be subject to change.

- This white paper summarizes future projects and goals.

This document expresses its forward-looking goals and concerns based on Veuter's beliefs references Presentations and information about the "Veuter" it is included. Veuter is under development as stipulated in this document and is continuously. Veuter will continue to update and improve himself. It is updated and developed within the limits set by the basic form of management. Veuter development process at the time of completion, it has a completely different structure than the features specified in this document may be. Although the specified dates and times are expressed as estimates, there is a clear acceptance is not shown. This document is an offer or request subject to securities or other regulations. discourages. Any investment promotion is not an invitation or request text. Veuter reserves its own capital, shares, copyrights, profits, returns.
